Computational Management of Data – Part II (A.Y. 2025/2026)
Second Cycle Degree in Digital Humanities and Digital Knowledge
Alma Mater Studiorum - Università di Bologna

Summary of the previous lectures (1/3)

A datum is a declarative statement subject-predicate-object that, through the predicate, either **attributes** a **literal** (i.e. a value such as a string, a number, etc.) to a subject **entity** *or* it **relates** such a subject **entity** with another **entity**

Each entity, being used either as subject or object of a statement, is characterised by **a unique identifier**

The **same entity** can be used as subject or object in one or more data, while a literal **cannot be used** as subject in any datum

An attribute is intrinsically **part of** the entity to which it is associated – modifying the value of an attribute affect **only** the entity to which it refers to

A **data model** is an abstract, simplified and formal representation of some data related to a system or a real domain, and enables us to describe what a data collection is about and to check data correctness

A **data model** permit one to specify <u>classes of entities, their attributes and relations</u>

Summary of the previous lectures (2/3)

Depending on the structure in which data are stored , queries to datasets are approached differently:

- With **tabular data**, often you have to combine tables between them to obtain bigger tables which contain the query requirements and the related answer

- With **graph data**, you explore the graph starting from fixed points (i.e. known entities, values, predicates) to find a pattern that is compliant with the query

We use **descriptive statistics** as methods to summarize and describe data in a quantitative way – (measures of central tendency) Mean; Median; Mode, (measures of variability) minimum, maximum, and standard deviation

Summary of the previous lectures (3/3)

The creation of the database structures, the mechanism to upload new data into the database, and all the facilities for querying database data, are enabled by the **database management system (DBMS) –** available as **standalone** applications or Embedded DBMS

A **transaction** is a unit of work performed within a DBMS against a database – it represents any change in a database – are one of the main components that enables the integrity of data, being them executed fully or causing a rollback of the database

SQL

The Structured Query Language (SQL) is a query language used and designed for managing data in a relational database management system

It is a standard that is implemented in all relational database management systems, and allows one to create tables, to populate them, and finally to query them using a particular syntax

Be aware: even if it is a standard, porting SQL code from a database management system to another may require some changes

*A good tutorial is available at: https://www.sqlitetutorial.net/

Basic SQL syntax for queries

`SELECT <columns>`	A comma-separated list of columns to have as result of the query ("*" means *all the columns*)
`FROM <tables>`	The table(s) from which to retrieve the data
`WHERE <conditions>`	*[OPTIONAL]* A condition that must hold to include the row of a table in the result of the query
`;`	

Questions to remind for designing a query:

- Which tables do you need?
- Which columns do you select?

Exemplar tables for queries

Data in the tables

Queries

(Q1) Retrieve complete information about all journal articles

(Q2) Retrieve the titles of all journal articles

(Q3) Retrieve the title of the journal article with DOI “10.1016/s1367-5931(02)00332-0”

(Q4) Retrieve the title of the publication with DOI “10.1016/s1367-5931(02)00332-0”

(Q5) Return the name of the journal of the article with DOI “10.1016/s1367-5931(02)00332-0”

(Q6) Return the id and name of the journal of the article with DOI “10.1016/s1367-5931(02)00332-0”

Q1

Retrieve complete information about all journal articles

- Which tables do you need? **JournalArticle**
- Which columns do you select? ***(all columns)**

```
SELECT *
FROM JournalArticle;
```

JournalArticle

internalId	doi	publicationYear	title	issue	volume	publicationVenue
publication-0	10.1002/cfg.304	2003	Development of Computational Tools for the Inference of Protein Interaction Specificity Rules and Functional Annotation Using Structural Information	4	4	venue-0
publication-1	10.1016/s1367-5931(02)00332-0	2002	In vitro selection as a powerful tool for the applied evolution of proteins and peptides	3	6	venue-1

Q2

Retrieve the titles of all journal articles

- Which tables do you need? **JournalArticle**
- Which columns do you select? **title**

```
SELECT title
FROM JournalArticle;
```

JournalArticle

internalId	doi	publicationYear	title	issue	volume	publicationVenue
publication-0	10.1002/cfg.304	2003	Development of Computational Tools for the Inference of Protein Interaction Specificity Rules and Functional Annotation Using Structural Information	4	4	venue-0
publication-1	10.1016/s1367-5931(02)00332-0	2002	In vitro selection as a powerful tool for the applied evolution of proteins and peptides	3	6	venue-1

Q3

Retrieve the title of the journal article with DOI “10.1016/s1367-5931(02)00332-0”

- Which tables do you need? **JournalArticle**
- Which columns do you select? **title**

```
SELECT title
FROM JournalArticle
WHERE
doi='10.1016/s1367-5931(02)00332-0';
```

JournalArticle

internalId	doi	publicationYear	title	issue	volume	publicationVenue
publication-0	10.1002/cfg.304	2003	Development of Computational Tools for the Inference of Protein Interaction Specificity Rules and Functional Annotation Using Structural Information	4	4	venue-0
publication-1	10.1016/s1367-5931(02)00332-0	2002	In vitro selection as a powerful tool for the applied evolution of proteins and peptides	3	6	venue-1

Q4

Retrieve the title of the publication with DOI “10.1016/s1367-5931(02)00332-0”

- Which tables do you need? **BookChapter** **JournalArticle**
- Which columns do you select? **title**

```
SELECT title
FROM BookChapter
WHERE
doi='10.1016/s1367-5931(02)00332-0'

UNION

SELECT title
FROM JournalArticle
WHERE
doi='10.1016/s1367-5931(02)00332-0';
```

BookChapter
